

COMMERCIAL WASTE TRANSPORTERS

Effective as of June 2005, commercial waste transporters are required to have a State registration F.O.G. number, an annual vehicle inspection and permit issued by a local governing authority. Senate Bill 568 became law in 2004 to control the illegal discharge by waste transporters to municipalities sanitary sewer systems. Since most local governing authorities are under mandate by the EPD to prevent sanitary sewer overflows, it has been determined that grease dumped illegally is a major factor in sanitary sewer overflows. In cooperation with the State, Fulton County F.O.G. pretreatment program inspects and issues permits to commercial waste transporters. In addition to issuing permits, waste transporters' manifests are verified for accuracy when received for any facilities pumped in unincorporated Fulton County.

Fulton County F.O.G. Pretreatment Program

**Promoting a cleaner
environment by controlling
fats, oils and grease.**

Water Protection Section

PUBLIC WORKS

Program Purpose

The F.O.G. pretreatment program is an environmental program that regulates the discharge, collection, transportation and disposal of oil/grease waste which might adversely affect the operation and conditions of sanitary sewer service lines and POTW in Fulton County. In order to administer an effective F.O.G. pretreatment program, the Public Works department has developed specific control mechanisms to be used to control the discharge of oil/grease waste from commercial facilities.

The F.O.G. pretreatment inspections program was developed to control the discharge of commercial grease waste to Fulton County sanitary sewers and POTW plants. It was determined that the inspections of commercial waste generators' pretreatment systems on a regular basis would minimize sanitary sewer overflows due to commercial grease waste, and reduce sanitary sewer stop-ups due to grease accumulation.

EXTERIOR GREASE TRAP

Program Monitoring

Commercial Waste Generators

The F.O.G. pretreatment program is responsible for inspecting 2500 facilities in North and South unincorporated Fulton County. This includes the following cities, Alpharetta, Roswell and Sandy Springs, Johns Creek and Milton

Types of Commercial Generators

- HOTELS/MOTELS
- SCHOOLS/PRE-SCHOOLS
- RESTAURANTS
- CHURCHES
- CATERING SERVICES/BAKERIES
- COUNTRY CLUBS
- GROCERY STORES
- GAS STATIONS
- OFFICE BUILDINGS
- SENIOR CITIZEN FACILITIES
- CAR DEALERSHIPS
- CAR MAINTENANCE SHOPS
- COMMERCIAL CAR WASHES

Program Staffing

The Fulton County F.O.G. program staff consists of (8) inspectors and (1) plan review engineer. All inspectors are trained and certified as Facility Pre-treatment Inspectors. Due to the number of facilities that are monitored in the F.O.G. program, (2) locations have been established. The staff handles multiple tasks which include the following;

1. Routine Inspections
2. New Construction Inspections
3. Investigate pretreatment spills
4. Respond to customer complaints regarding grease
5. Review and permit plans of new development
6. Provide education and information to generators and public
7. Issue violation notices to generators and waste transporters
8. Fee collection for inspections and plan review
